## Activity 1 – Adding fragments statically

### Layout

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">

    <fragment
```

```

        android:id="@+id/fragment"
        android:name="com.example.fragement_activity.fragement1"
        android:layout_width="0dp"
        android:layout_height="match_parent"
        android:layout_weight="1" />

<fragment
    android:id="@+id/fragment2"
    android:name="com.example.fragement_activity.fragement2"
    android:layout_width="0dp"
    android:layout_height="match_parent"
    android:layout_weight="1" />
</LinearLayout>

```

```

<?xml version="1.0" encoding="utf-8"?>
<FrameLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".fragement1">

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Fragement 1 "
        android:textSize="40sp"
        android:textColor="@color/design_default_color_primary"
    />

</FrameLayout>

```

```

<?xml version="1.0" encoding="utf-8"?>
<FrameLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".fragement2">
    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Fragement 2 "

```

```
        android:textSize="40sp"
        android:textColor="@color/design_default_color_primary"
    />
```

```
</FrameLayout>
```

## Logic Code

```
package com.example.fragement_activity;

import androidx.appcompat.app.AppCompatActivity;
import androidx.fragment.app.FragmentManager;
import androidx.fragment.app.FragmentTransaction;

import android.os.Bundle;

public class MainActivity extends AppCompatActivity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        FragmentManager manager=getSupportFragmentManager();
        FragmentTransaction transaction=manager.beginTransaction();

        transaction.add(R.id.fragment,new fragement1());
        transaction.add(R.id.fragment2,new fragement2());

        transaction.commit();

    }
}
```

```
package com.example.fragement_activity;

import android.os.Bundle;

import androidx.fragment.app.Fragment;

import android.view.LayoutInflater;
```

```
import android.view.View;
import android.view.ViewGroup;

public class fragement1 extends Fragment {

    @Override
    public void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
    }

    @Override
    public View onCreateView(LayoutInflater inflater, ViewGroup container,
                             Bundle savedInstanceState) {
        return inflater.inflate(R.layout.fragment_fragement1, container, false);
    }
}
```

```
package com.example.fragement_activity;

import android.os.Bundle;

import androidx.fragment.app.Fragment;

import android.view.LayoutInflater;
import android.view.View;
import android.view.ViewGroup;

public class fragement2 extends Fragment {

    @Override
    public void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
    }

    @Override
    public View onCreateView(LayoutInflater inflater, ViewGroup container,
                             Bundle savedInstanceState) {
        // Inflate the layout for this fragment
        return inflater.inflate(R.layout.fragment_fragement2, container, false);
    }
}
```

## Output

Frage  
ment  
1

Frage  
ment  
2

## Activity 2: Dynamic Frgements

### Layout
